TestBank IT Security Policy

Version 3.2 | Owner: Information Security Team | Effective: 1 April 2026

1. Purpose and scope

This policy explains how every TestBank employee, contractor and intern must protect company information and IT systems. It applies to all company devices and to any personal device used to access company email or systems. Breaking this policy may lead to disciplinary action, up to and including termination of employment or contract.

2. Passwords

Passwords must be at least 12 characters long and include upper-case letters, lower-case letters, numbers and a symbol. Passwords must be changed every 90 days. You cannot reuse any of your last 5 passwords. Never share your password with anyone, including IT staff. The IT Helpdesk will never ask for your password by phone, chat or email. Using a password manager approved by IT (TB Vault) is strongly recommended.

3. Multi-factor authentication (MFA)

MFA is mandatory for all employees for email, VPN and all cloud applications. Use the Microsoft Authenticator app on your phone. If you change or lose your phone, contact the IT Helpdesk on extension 4357 before your old phone is reset, so your MFA can be moved.

4. Locking your device

Lock your screen whenever you leave your desk (Windows key + L). Company laptops lock automatically after 5 minutes of inactivity. Never leave a laptop unattended in a public place such as a cafe, train or airport.

5. Data classification

All company information belongs to one of four classes: Public (can be shared outside the company), Internal (for employees only), Confidential (only for people who need it for their work) and Restricted (highest protection, such as customer personal data and financial results before publication). Confidential and Restricted information must not be sent to personal email accounts, uploaded to personal cloud storage, or entered into public AI tools such as free online chatbots. Restricted information must be encrypted when sent outside the company.

6. Email and phishing

Be suspicious of unexpected emails asking you to click a link, open an attachment, pay an invoice or enter your password. Report suspicious emails with the "Report Phishing" button in Outlook. Do not forward them to colleagues. If you clicked a link or entered your password on a suspicious page, call the IT Helpdesk on extension 4357 immediately, even outside office hours.

7. USB drives and removable media

USB storage devices are blocked on all company laptops. Use OneDrive or SharePoint to share files. If you have a business need for a USB device (for example, a client presentation at an external venue), request an exception on the IT Portal. Exceptions are valid for a maximum of 30 days.

8. Reporting security incidents

Report any security incident within 1 hour of noticing it. Examples: a lost or stolen device, a virus warning, a suspicious login alert, or data sent to the wrong person. Report by calling extension 4357 or emailing security@testbank.com. You will not be punished for reporting an honest mistake quickly; late reporting makes the damage worse.
