TestBank IT Self-Help Guide

Version 1.0 | Owner: IT Service Desk | Effective: 1 October 2026

This guide explains how to fix the most common IT problems yourself, in a few minutes, without waiting for a ticket. If the steps below do not solve your problem, ask the IT virtual agent to raise a ticket for you.

1. Forgotten or expired password

You can reset your password yourself on the Self-Service Password Portal: https://selfservice.testbank.example/reset (example link for this demo).

Steps: (1) Open the portal on your phone or any computer. (2) Enter your work email address. (3) Approve the sign-in request in the Microsoft Authenticator app on your phone. (4) Choose a new password that follows the IT Security Policy: at least 12 characters with upper-case letters, lower-case letters, numbers and a symbol, and not one of your last 5 passwords. (5) On your laptop, connect to the office network or the TB Connect VPN, then lock and unlock your screen (Windows key + L) so the laptop picks up the new password.

Your new password works for email, VPN and your laptop within 5 minutes. If the portal says your account is locked, or you do not receive the Authenticator request, ask for a ticket for the Service Desk.

2. Account locked

Your account locks after 5 wrong password attempts and unlocks automatically after 30 minutes. Wait 30 minutes and try again, or reset your password on the Self-Service Password Portal to unlock it immediately.

3. New phone and multi-factor authentication (MFA)

If you still have your old phone: open https://mysignins.testbank.example/security-info (example link for this demo), choose Add sign-in method, set up Microsoft Authenticator on the new phone, test it, and then delete the old phone from the list. Do this before you reset or give away the old phone.

If your old phone was lost or stolen, this is a lost device: report it immediately so IT can block it. The virtual agent will raise an Urgent ticket.

4. Printer problems

Paper jam error but no paper is stuck: open every tray and door, check for small pieces of paper, close everything firmly, then switch the printer off for 30 seconds and on again. This clears most false paper jam errors.

Cannot find the printer on your laptop: go to Settings, Bluetooth & devices, Printers & scanners, choose Add device and select your floor's printer, for example TKY-3F-Printer.

Print job stuck: open Printers & scanners, select the printer, open the print queue and cancel all documents, then print again. If the printer still shows an error, ask for a ticket for the Service Desk and include the printer name.

5. VPN (TB Connect) quick fixes

(1) Check that your internet works by opening a public website. (2) Quit and restart the TB Connect app. (3) Restart your laptop. (4) Make sure notifications for the Authenticator app are switched on. See the Remote Work and VPN Guide for details. If it still fails, ask for a ticket for the Network Team.

6. Outlook or Teams not updating

(1) Check your internet or VPN connection. (2) Fully quit the app (right-click its icon in the taskbar and choose Quit) and open it again. (3) Sign out and sign in again. (4) For Teams, clear the cache: quit Teams, delete the contents of the folder %appdata%\Microsoft\Teams, and restart Teams.

7. When to ask for a ticket straight away

Do not use self-help for: broken or damaged hardware, lost or stolen devices, security incidents (for example you clicked a suspicious link), requests for new software or equipment, or anything the steps above did not fix. Ask the virtual agent to raise a ticket instead.
